### First Click: The Internot of Things (IøT) backlash

Consumer tech is currently bound by two extremes. On one side you have the so-called Internet of Things (IoT) characterized by too much technology. On the other side we have an equal and opposite force that tries to squelch technology and the bad habits we've developed around its usage. Let's call it the Internot of Things (IøT). Both prey upon gullibility. Seguir leyendo

Internet de las Cosas: ¿cómo lo ha adoptado Colombia?

El proceso de transformación digital es imparable. Las tecnologías emergentes como la inteligencia artificial, las impresoras 3D, el Internet de las Cosas (IoT, por sus siglas en inglés) y el blockchain marcan la pauta en cuanto a innovación digital.

Sin embargo, se estima que en Colombia solo dos de cada diez empresas utilizan una solución basada en loT, pero que ocho de cada diez cuenta Seguir leyendo

helping the protect the

The Isles of Scilly have bold energy goals designed to How tech is help protect its fragile environment – solar, batteries and the IoT could be the solution.

The Isles of Scilly have set themselves a challenge: to shift to 40 per cent renewable energy by 2025, reducing electricity bills by 40 per cent. But to make the best use of locally-produced energy harvested from solar panels, environment you need to know how much you're using in the first place. Seguir leyendo

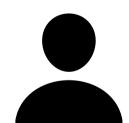

#### 7 smart city innovations you need to know about

How the Internet of Things (IoT) is connecting up our cities in real-time.

Smart cities are on their way – and this time they're for real. Disparate aspects of cities are beginning to connect with internet of things (IoT) devices.

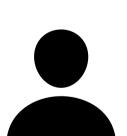

"Projects look at a single system – like transport – but don't link it with say, health," says Steve Turner, head of the Future City programme at Manchester City Council. "The next big challenge for the IoT is to link all the city systems." Seguir leyendo
